QUESTIONS

Q1

Design a Class Hierarchy
(Pseudocode)
5 marks

Q2

Complete the Missing
Pseudocode
5 marks

Q3

Debug the Pseudocode
5 marks

Q4

Trace the Execution
5 marks

Q5

Write Efficient Pseudocode
5 marks

Q6

Convert Problem Statement
into Pseudocode
5 marks

Q7

Complete the Pseudocode

Q1 Design a Class Hierarchy (Pseudocode)

5 marks

Problem Statement

A university wants to automate its examination process.

Design the pseudocode for the following hierarchy:

Person

Name

Age

Student inherits Person

Register Number

Marks (5 subjects)

Calculate Average()

ResearchStudent inherits Student

Research Area

Display Complete Details()

The program should create an object of ResearchStudent, calculate the average, and display all information.
