

Last Index of a : 11

Customer Type : Local Customer

Your Code

```
1 import java.util.Scanner;
2 public class Main{
3     public static void main(String[] args) {
4         Scanner sc = new Scanner(System.in);
5         String input = sc.nextLine().trim();
6         String[] s = input.split("\\|");
7         String name = s[0];
8         String email = s[1];
9         String city = s[2];
10        String product = s[3];
11        System.out.println("Name Length : " + name.length());
12        System.out.println("First Character : " + name.charAt(0));
13        System.out.println("First Name : " + name.split(" ")[0]);
14        System.out.println("Email : " + ((email.contains("@") && email.endsWith(".com")) ? "Valid" : "Invalid"));
15        System.out.println("Modified Name : " + name.replace(' ', '_'));
16        System.out.println("Product : " + product.toUpperCase());
17        System.out.println("City : " + city.toLowerCase());
18        System.out.println("@ Position : " + email.indexOf('@'));
19        System.out.println("Last Index of a : " + name.lastIndexOf('a'));
20        System.out.println("Customer Type : " + (city.equalsIgnoreCase("Local") ? "Local Customer" : "Remote Customer"));
21    }
22 }
23 }
```
