

```
1 interface CouponDiscount {
2     double calculateDiscount(double cost, String code);
3 }
4
5 class FoodOrder implements
6     DeliveryCharge, CouponDiscount {
7     public double
8         calculateDeliveryCharge(double cost)
9     {
10         return cost >= 500 ? 0 : 50;
11     }
12     public double
13         calculateDiscount(double cost, String code ){
14         return
15             code.equals("SAVE10") ? cost * 0.10 : 0;
16     }
17
18     public static void main(String[] args) {
19         Scanner sc = new Scanner(System.in);
20         double cost = sc.nextDouble();
21         sc.nextLine();
22         String code = sc.nextLine();
23         FoodOrder f = new FoodOrder();
24         double dc = f.calculateDeliveryCharge(cost);
25         double dis = f.calculateDiscount(cost, code);
26         System.out.println("Food Cost : " + cost);
27         System.out.println("Delivery Charge : " + dc);
28         System.out.println("Discount : " + dis);
29         System.out.println("Final Bill:" + (cost + dc - dis));
30     }
31 }
32
33 }
```

Output

```
Food Cost : 600.0
Delivery Charge :0.0
Discount :60.0
Final Bill:540.0
```
